

# GENERAL CROSS-DISCIPLINARY PERSPECTIVES

Paul Heggarty

Linguistics, Max Planck Institute for Evolutionary Anthropology, Leipzig

Paul.Heggarty@gmail.com — <http://eva-mpg.academia.edu/PaulHeggarty>

# WHY CROSS-DISCIPLINARITY?

“A cross-disciplinary whole greater than the sum of its individual discipline parts.”

(Pre)History:

“A damn dim candle over a damn dark abyss” (Charles A. Beard)

- So get as many candles as we can:  
= ‘multi-proxy’ evidence from as many data sets and methods as possible.

# WHY NOW? LIVING A REVOLUTION

- Advances opening up new 'windows on our past':
  - Genomic revolution.
  - Ancient DNA.
  - Isotope 'provenience' analysis.
  - Reconstructing palaeoclimate.
  - etc...
- A new science of human (pre)history?

MAX PLANCK INSTITUTE FOR THE SCIENCE OF HUMAN HISTORY

NEWS | ARCHAEOGENETICS | LINGUISTIC AND CULTURAL EVOLUTION | SERVICE

Professor Russell Gray, Ph.D. FRGS, Director

Professor Dr. Johannes Krause, Director

The Max Planck Institute for the Science of Human History focuses on the development and application of new scientific methods to produce an integrated science of human history. It bridges the gap between history and natural sciences by bringing together biologists, linguists and social scientists to apply cutting edge genetic, sequencing and computational advances from the natural sciences while still maintaining the highest standards of scholarship from the humanities. This thoroughly integrated, interdisciplinary approach will allow long-standing questions about human history that were previously deemed difficult, or even completely intractable, to be resolved.

**DNA documents ancient mass migration**

DNA analysis has revealed evidence for a massive migration into the heartland of Europe 4,600 years ago.

Steppe migration rekindles debate on language origin

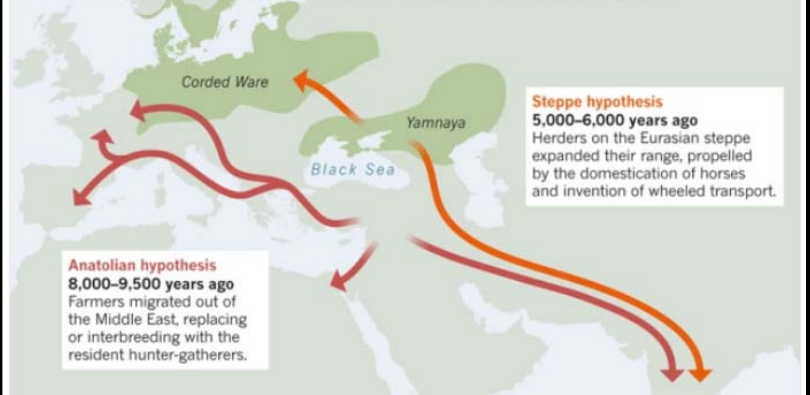

Eurasian region gains ground as birthplace of Indo-European tongues.

Ewen Callaway

18 February 2015

STEPPE IN TIME

An ancient-DNA study links the Corded Ware culture of northern Europe with the Yamnaya culture of the Eurasian steppe. It points to a mass migration northwest that would support the Steppe hypothesis, one of two theories that compete to explain the origins of the Indo-European family of languages.

# EXAMPLE: WHAT LANGUAGES TELL US OF THE PAST

TODAY

IRON AGE

But why me?

- Language families do not happen by chance, for no reason.
- All Roman, not all Romance — but mismatches informative on Roman rule.

# PRINCIPLE: 'REAL-WORLD' CAUSE → LINGUISTIC EFFECT

- Family = single ancestor language, small 'homeland' → major expansion.

Language families only exist because of powerful expansive processes impacting upon people/cultures.

[= Linguistic evidence of past processes impacting on populations and cultures.]

# PROCESSES: 'FORCES OF HISTORY' — BUT WHICH?

- Demographic.
- Subsistence.
- Economic.
- Technological.
- Political.
- Socio-cultural.

- Population size, density, growth and expansion.
- Contacts with (or isolation from) other populations.
- Power and/or prestige/utility of a cultural package (and language?).
- Driving forces in modern globalised world not representative of prehistory!

## WHY ARE THE DISCIPLINES LINKED: THROUGH 'PROCESSES'

The same processes shaped and left patterns in all records of human past:

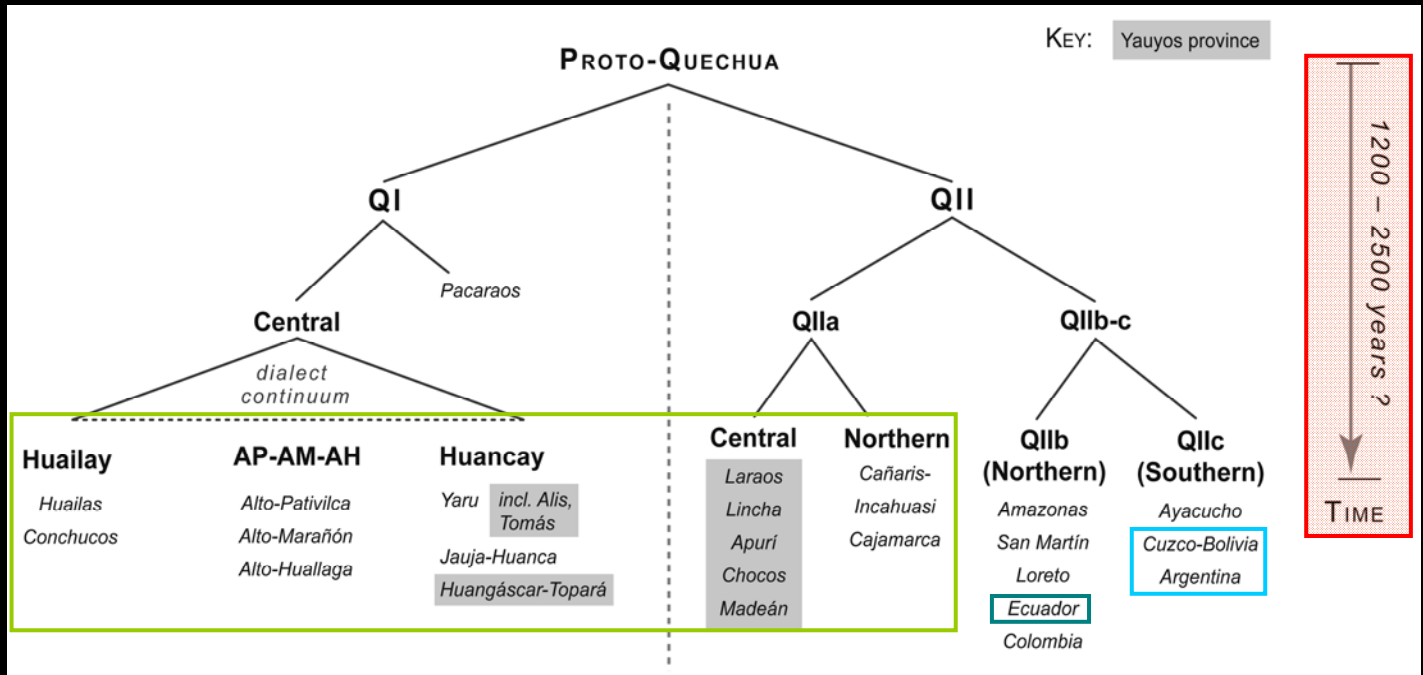

- DNA, modern and ancient.
- Human remains ('bio-archaeology').
- Material culture.
- Languages.

'Processes' impacting on human societies and populations.

The real link between the disciplines!

e.g. Language families = expansive, divergent processes.

# DIMENSIONS TO MATCH: WHERE, WHEN AND WHY?

How a language family tree (e.g. Quechua) informs on different levels.

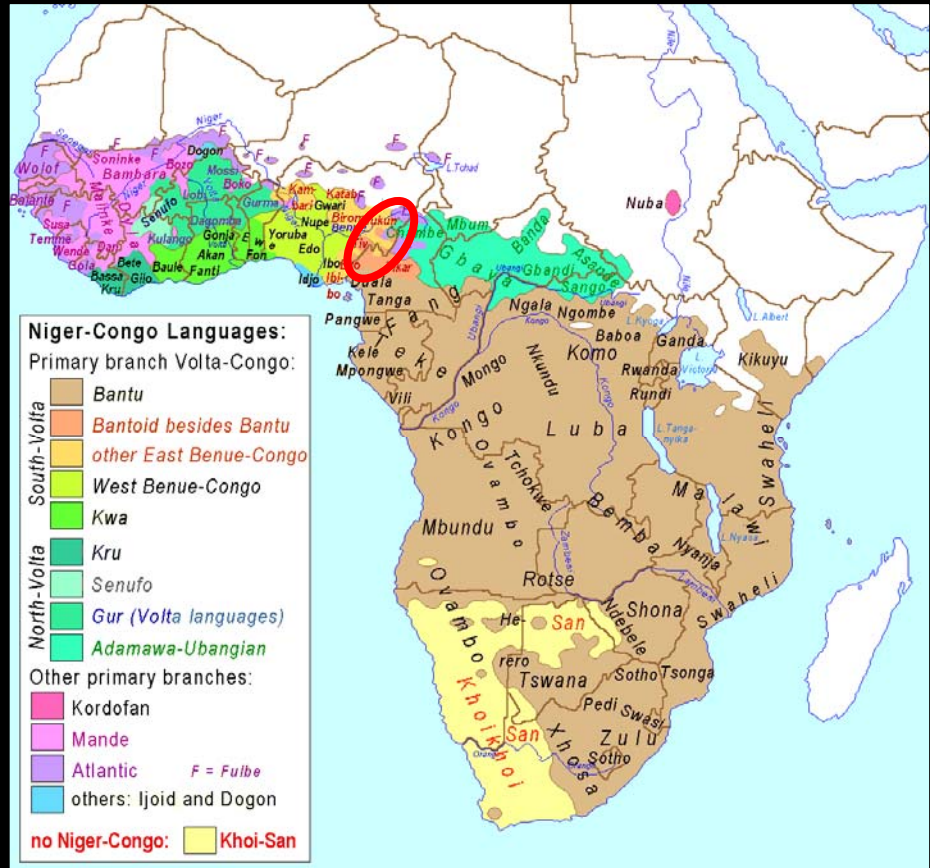

# THREE LEVELS: ROMANCE

- Where:
  - Rome/Latium.
- When:
  - from 2<sup>nd</sup> century BC.
- Why:
  - Roman Empire, with its many impacts.

# THREE LEVELS: BANTU

- Where:
  - Nigeria/Cameroon border region.
- When:
  - 2000-1000 BC?
- Why:
  - Farming and iron-working.

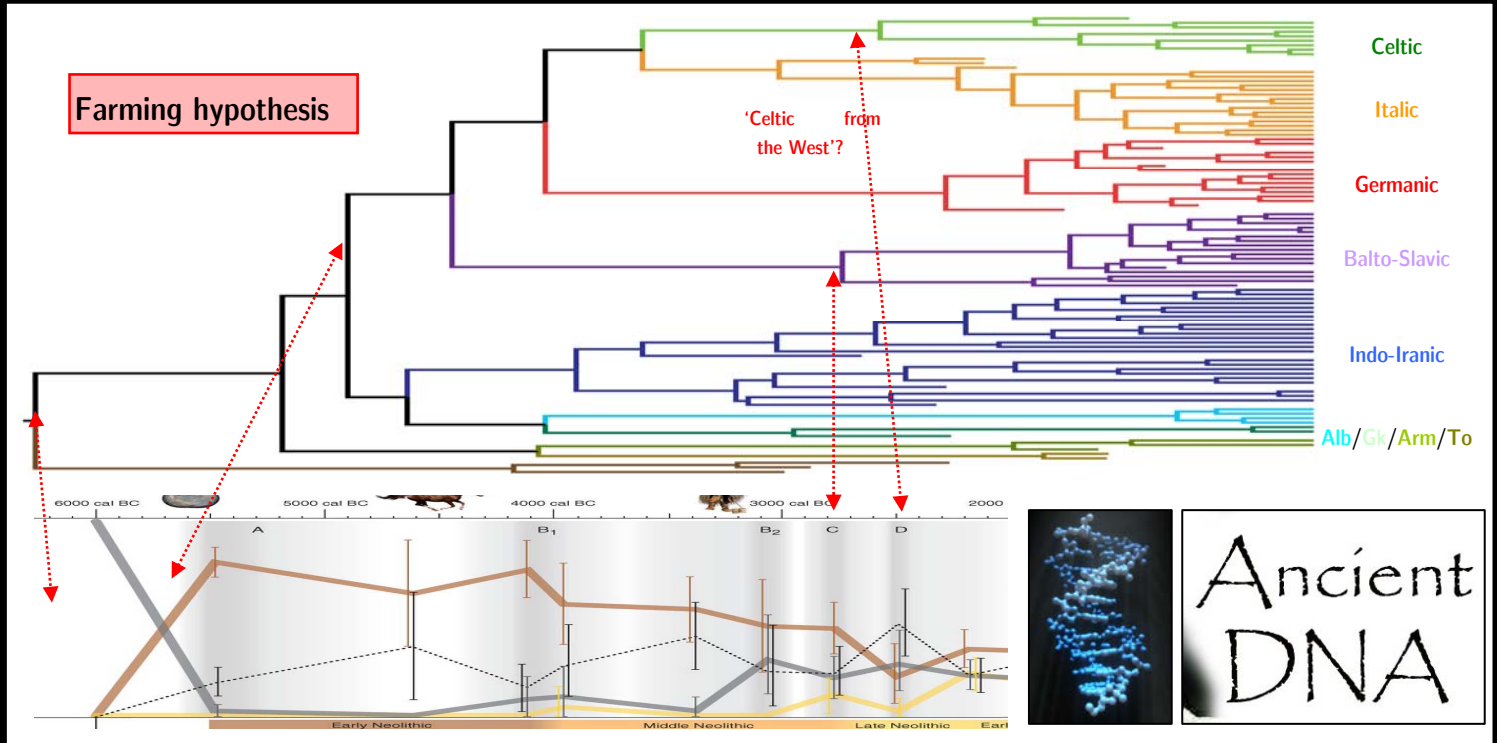

# INDO-EUROPEAN: A SAMPLE ENIGMA

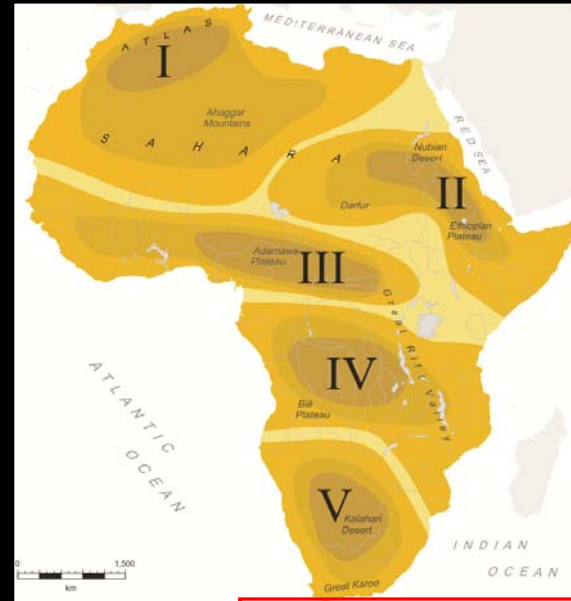

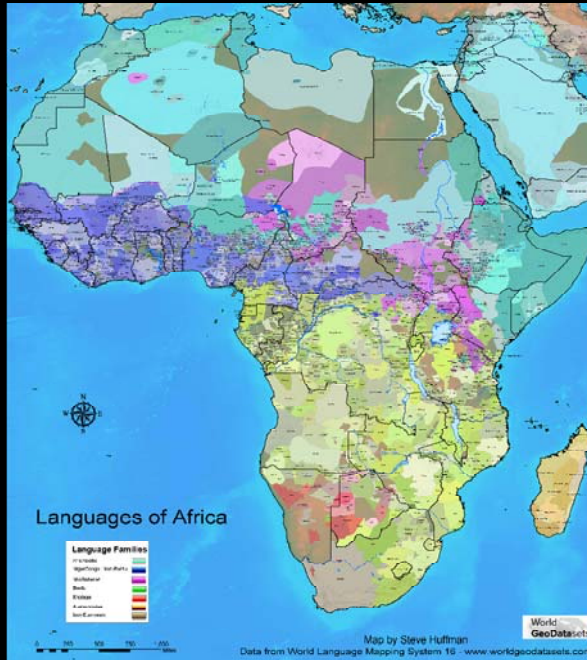

- **When?**
  - Short chronology: c. 6000 BP.
  - Long chronology: c. 9500 BP.
- **Where?**
  - Pontic-Caspian Steppe (Ukraine).
  - Central-East Anatolia (Turkey).
- **Why?**
  - Nomadic pastoralism and technologies: domestication of horse, riding, wheel.
  - Farming, demographic expansion.

# UNLOCKING THE LANGUAGE OF THE GENES?

# NOT JUST FAMILIES: OTHER EFFECTS, OTHER CAUSES

↑ Güldemann (2010)

## Language Families

← expansive, divergent processes

Clear-cut: Member of family, yes or no?

## Linguistic Areas

← convergent processes.

Diffuse: core vs. periphery.

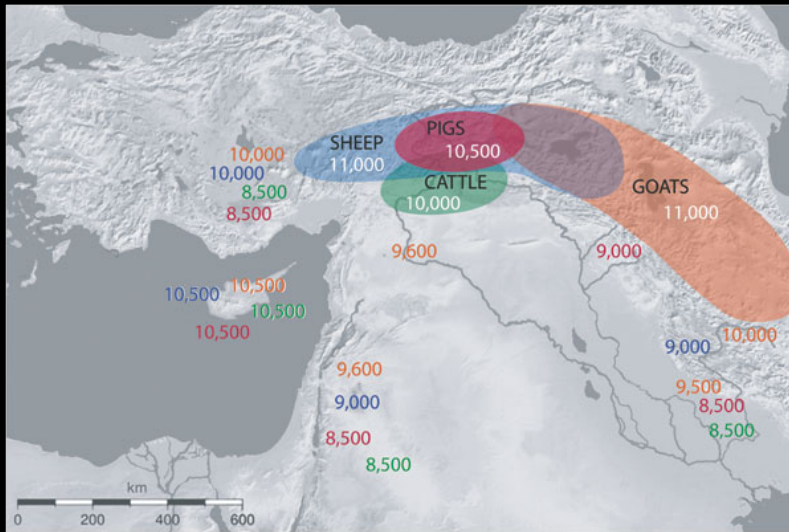

# ARCHAEOLOGICAL PATTERNS: CORE VS. PERIPHERY

... the most widely used approach in anthropology and history divides empires into their core and periphery.

D'Altroy (2014: 9) *The Incas*

## NEOLITHIC ANIMAL DOMESTICATES

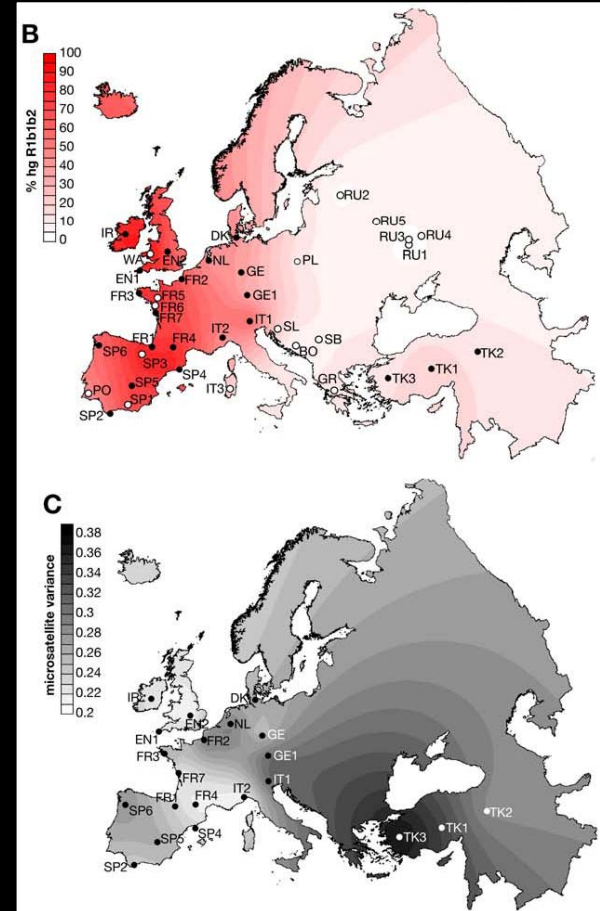

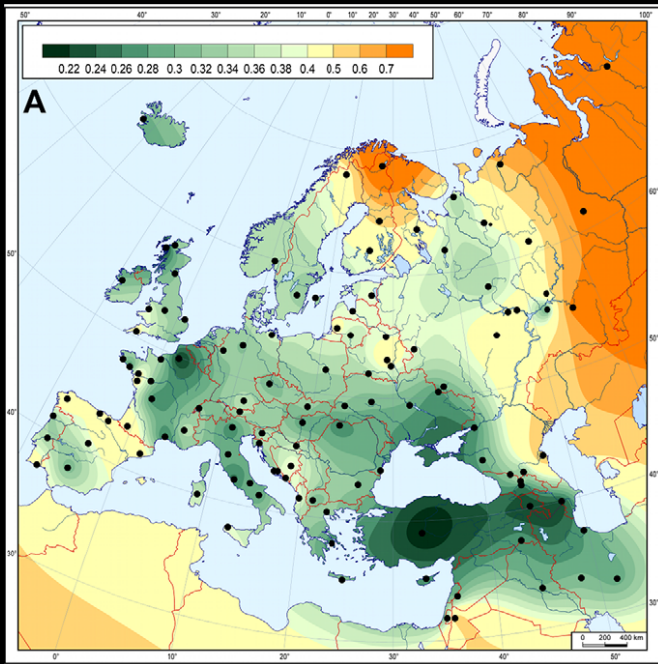

## GOTHIC ARCHITECTURE!

# GENETIC PATTERNS: CLINES AND DIFFUSION

Balaresque *et al.* (2010)

[Paternal lineage — modern DNA] →

- ↑ Haak *et al.* (2010) [Maternal lineage — ancient vs. modern DNA]
- Or just mathematical artefacts? Novembre & Stephens (2008).

# PERSPECTIVES FROM ELSEWHERE

- Most lineages spread in from the north:
  - Drawn by farming lands?
  - Pushed by Chinese southward spread?
- Distributions in part by altitude/eco-zone 'niche':  
*e.g.* Hmong-Mien as 'mountain peoples'.

- Many scattered small families and isolates.
- Four major mid-age families, but distributions very fragmented and intermixed.
- Contexts shaping these patterns?  
*e.g.* Shifting cultivation, river corridors for migration and trade, flood plains vs. interior...

# WHAT'S SPECIAL ABOUT THIS MEETING?

## HOW TO APPROACH IT

- Aim is to advance not thinking *within* any one discipline — that is for conferences in each field.
- Gains here are from opening up each discipline to perspectives of others.

## WHO CAN HELP WHO?

- What in your discipline should be of most **relevance/value to** others.
- What are the main **findings** in your discipline, and main **opposing views**.
- What your own discipline could most benefit from learning **from** others?

# TARGET AUDIENCE

- Your target audience is in all other disciplines, not your own.
  - Make sense to area specialists in disciplines other than yours.
  - Do not descend into in-house technical disagreement within your discipline.

# TERMINOLOGY

- Avoid with terms that may have unclear or inconsistent meanings:  
*e.g.* 'horizontal transmission', 'morphology', 'context'.
- Avoid technical terms wherever possible:  
*e.g.* morphology → word structure      phonology → sound structure  
*e.g.* mtDNA → female line

# REPRESENT YOUR DISCIPLINE, NOT YOURSELF

- Represent (all) your discipline: **balanced** view, to help other disciplines not in a position to judge this well.
- Your presentations should not be partisan, your pet theories.

# CERTAINTIES, UNCERTAINTIES, AND HONESTY

- Help complement each other's strengths and weaknesses.
- What is sound consensus vs. what is disputed hypothesis?
- Come clean on what is clear-cut and **reliable** in your field — and what is not.  
*e.g.* Dating, population density/size, relatedness hypotheses.  
*e.g.* Anthropological studies of modern hunter-gatherers now confined to marginal environments — valid for inferences elsewhere, in prehistory?

# LANGUAGES, GENES AND CULTURE: INFORMATIVE MISMATCHES
